

U.S. JACK, going the extra distance to insure the HIGHEST QUALITY product possible.....

Computerized and metered delivery system for hydraulic fluid to all jacks insures the optimum operation of each jack when it leaves our factory.

Master gages, re-calibrated and re-certified annually.

Our industrial parts washer is used to power wash every component that goes into our jacks to eliminate as much contamination to the internal workings of the jack as is possible to insure the longevity of our equipment in the field.

In house painting capability for short run production and custom finishes. Production painting capabilities for high volume applications are located off site.

In this final phase of production each bottle jack and long ram jack is pressure tested by qualified personnel.
